ON TRACK FOR DISCOVERY

FORWARD LOOKING STATEMENT

This presentation may contain forward-looking statements, including management's assessments of future plans & operations, expectations of future production, cash flow, earnings, property options, TSX approval and closing of a financing. These statements are based on current expectations that involve a number of risks & uncertainties, which could cause actual results to differ materially from those anticipated.

Forward-looking statements may be identified by the use of words such as "believes", "anticipates", "expects", "estimates", "may", "could", "would", "will", or "plan". Since forward looking statements are based on assumptions and address future events and conditions and property options by their very nature they involve inherent risks and uncertainties.

Actual results relating to, among other things, results of exploration, reclamation, capital costs, and the company's financial condition and prospects, could differ materially from those currently anticipated in such statements for many reasons such as but not limited to; changes in general economic conditions and conditions in the financial markets; changes in demand and prices for the minerals the Company expects to produce; litigation, legislative, environmental and other judicial, regulatory, political and competitive developments; technological and operational difficulties encountered in connection with the Company's activities; and changing foreign exchange rates and other matters discussed in this presentation.

Persons should not place undue reliance on the Company's forward-looking statements. Further information regarding these and other factors, which may cause results to differ materially from those projected in forward-looking statements, are included in the filings by the Company with securities regulatory authorities. The Company does not assume any obligation to update or revise any forward looking statement that may be made from time to time by the Company or on its behalf, except in accordance with applicable securities laws, whether as a result of new information, future events or otherwise.

The TSX Exchange has not reviewed and does not accept responsibility for the adequacy or accuracy of the contents of this presentation, that has been prepared by management.

This presentation does not constitute an offer to sell or a solicitation of an offer to buy any securities of the Company in any jurisdiction. Any such offer or solicitation will be made only in accordance with all applicable laws. The common shares of the Company will not be and have not been registered under the United States Securities Act of 1933, as amended, and may not be offered or sold in the United States, or to a U.S. person, absent registration or applicable exemption therefrom.

Crescat Capital LLC's Dr. Hennigh & Kevin Smith

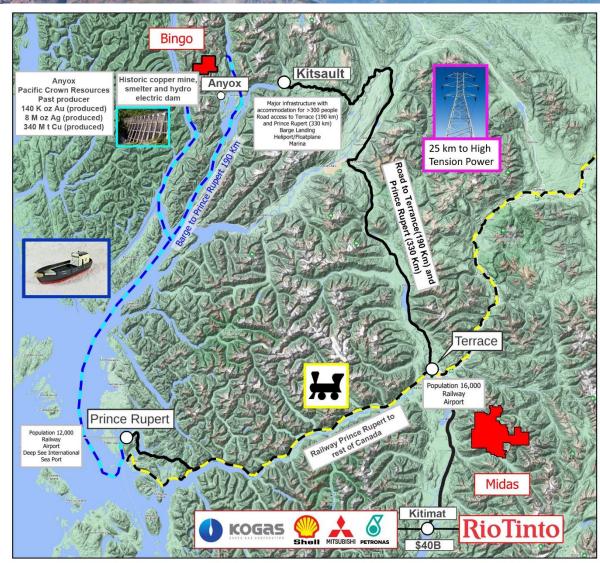

Dr. Hennigh stated, "Very promising results from 2023's maiden drill program confirmed strong potential for "Surebet" style intrusive-related gold-base metal lodes at Bingo. In addition, follow up drilling at Midas continues to demonstrate the presence of a large volcanogenic massive sulfide system in need of further work. With interest in the mining exploration space quickly heating up, it is critical that companies like Juggernaut get back to the job of making discovery. I look forward to working with the Company's team as plans are made for this year's drill campaign at both of these exciting projects."

"We look forward to helping Juggernaut continue their work at Bingo and Midas in the coming drill season, given the potential for a significant discovery, remarked *Kevin Smith*, Crescat's founder and Chief Investment Officer. "This is the same exploration team that delivered a major gold and silver discovery for us at Goliath Resources' Surebet. They are highly capable of doing the same at one or both of these targets."

CORPORATE OVERVIEW

- Juggernaut Exploration Ltd A New Ground Floor Opportunity
- Focused on Northwestern British Columbia With Exposure to Over 9 Precious and Base Metal Projects
- Seasoned Team: 30 Years of a Proven Track Record of Discovery Culminating in ~1 Billion Dollars of Value
- Bingo (High Grade Shear Hosted System)
- Midas Property (Eskay-style VMS system)
- Rapid Glacial and Snowpack Abatement resulting in discoveries

MANAGEMENT AND DIRECTORS

Dan Stuart, President & CEO, Director

- >20 years of capital market experience
- >100 million dollars raised in the natural resource sector
- Founding member and capitalizer of several private mineral syndicates J2, DSM, YCS, B2
- Institutional clients in both the Americas and Europe

William Jung, Director & CFO

- 35 years of experience in finance and business
- Former chartered accountant involved in management of companies on the TSX
- >25 years experience in the management of companies publicly listed on the TSX

Jim McCrea, Director

- 25 years experience in exploration and mining
- 20 years in mineral resource estimation including Cumberland Resources
- Ore body modelling and resource estimation for the successfully targeted take over company Cumberland Resources Ltd. By Agnico-Eagle Mines Ltd.

Chris Verrico, Director

- >20 years of managing mineral exploration projects in BC, Yukon, Alaska, Nunivut
- Experience as a contractor with extensive northern rural-remote infrastructure construction and contract mining projects

Peter Bryant, Director

- 45 years of experience in international finance and investment banking
- Former director of investment banking with Standard Chartered Group
- Worked for Hill Samuel Group and Guinness Mahon Holding's, two of the prestigious merchant banking house in London, England

Dr. Quinton Hennigh

Technical Advisor

 World renowned exploration geologist with >30 years of experience with major miners Homestake, Newcrest and Newmont. CHM & President of Novo TSX.V: NVO

Bill Chornobay

Program Manager

 >30 years proven track record; discoveries resulting in ~1 billion dollars in value.

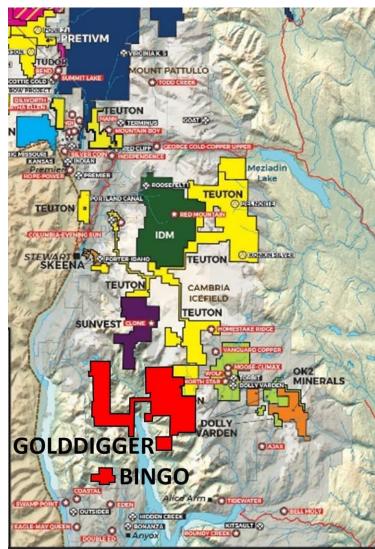

HIGH-GRADE BINGO PROPERTY

BINGO VIDEO 2024

Bingo Property

- Located 45 km SSW of Stewart, BC and 28 km W of Kitsault, BC and 12 km to tidewater landing and roads in the historic mining town of Anyox.
- Bingo property covers an area of 1008 ha
- Located within the Eskay Rift and Golden triangle where the vast majority of major deposits in British Columbia have been found.
- The Bingo property is located in the southern part of the Eskay Rift within the Golden Triangle
- The Eskay Rift is a geological control for over 60 volcanogenic massive sulphide (VMS)
 deposits, including the world's richest VMS exhalative deposit: the Eskay Creek gold-silver
 mine
- The southern end of the Eskay Rift records a near-continent, mid-ocean-ridge setting ideal for the development of VMS-type deposits
- Early and Middle Jurassic volcano-magmatic events generated the major metallogenetic endowments within the rift complex
- Several past-producing mines and new deposits in the immediate vicinity, including Anyox,
 Dolly Varden, Homestake Ridge and Golddigger Surebet discovery

Bingo Highlights

- 700 m x 400 m area of strong sulphide mineralization (includes Bingo Main Zone and Double Down Hinge Zone)
- Bingo Main Zone average width of 7.22 m of moderate, semi-massive and/or massive sulphide (2023-2024)
- Average grade 7.02 gpt AuEq (2023)
- Mineralization consists of chalcopyrite, sphalerite, native copper and cobaltite
- Strong K-Spar alteration in the northeast indicates proximity to potential porphyry feeder source
- Multiple new drill ready targets for 2025

2023 Maiden Drill Program

Average width of 7.02 m Average grade of 5.67 gpt AuEq

2024 Drill Program

- All holes drilled on the Bingo Main Zone have intersected substantial moderate, semimassive and/or massive chalcopyrite, cobaltite and native copper mineralization
- Average width of mineralized shear zone is
 7.32 m
- All exploratory holes drilled to the west and northwest of the Bingo Main Zone have intersected substantial K-Spar alteration increasing towards the north as well as sulphide mineralization
- 3464 meters drilled in 24 holes from 7 pad locations

REMAINS OPEN

K-SPAR ALTERATION

REMAINS OPEN

K-Spar alteration

- The K-Spar alteration observed to the west and north of the Bingo Main Zone consists of patchy replacement of groundmass by K-Spar and often contains veinlets and stringers of pyrite and/or chalcopyrite
- K-Spar alteration strongly indicates proximity to a potential porphyry system at depth.
- The system remains open along strike and to depth, providing excellent additional discovery potential.

BI-24-23 - Pad 5 - K-Spar alteration from 14.83 m to 21.82

BI-24-29 - Pad 6 - K-Spar alteration from 47.60 m to 79.65

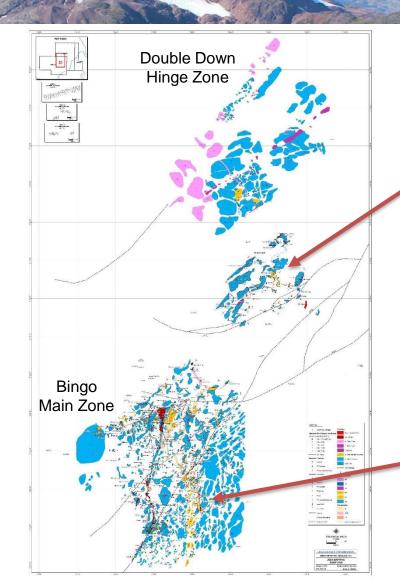

BI-24-31 - Pad 7 - K-Spar alteration from 33.05 m to 184.50

TSX-V: JUGR | FSE: 4JE | OTCQB: JUGRF https://juggernautexploration.com/

2024 Mapping and Exploration

- New detailed geologic map identified mineralization in Double Down Hinge Zone
- Multiple New Outcrops containing chalcopyrite, cobaltite, native copper and molybdenite
- Multiple occurrences of K-Spar alteration, indicating proximity to potential porphyry source
- The system remains open along strike and to depth, providing excellent additional discovery potential.

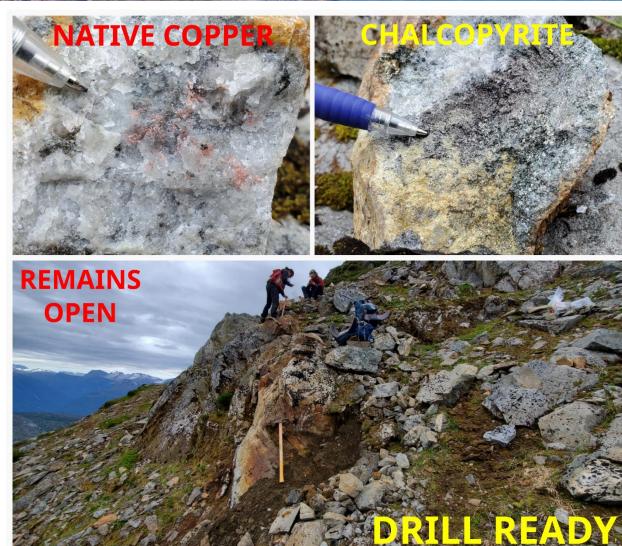

https://juggernautexploration.com/

Double Down Hinge Zone

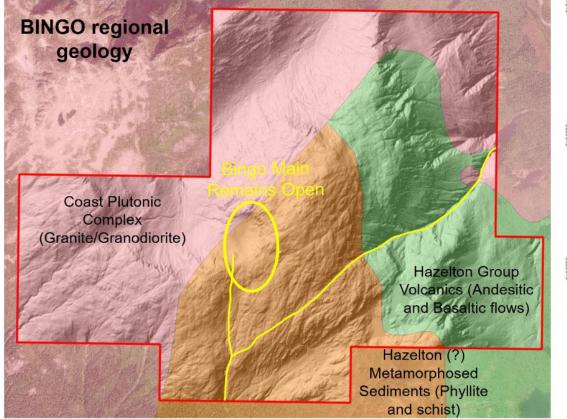

- The newly discovered mineralized shear zone located on the Double Down Hinge Zone is up to 10 meters wide, is exposed for 300 m along strike and has a dip of 40 to the southwest and remains open.
- New Zone contains chalcopyrite, native copper and molybdenite
- In addition to strong sulphide mineralization, this zone also displays extensive K-Spar alteration, suggesting proximity to a deepseated potential porphyry feeder source.

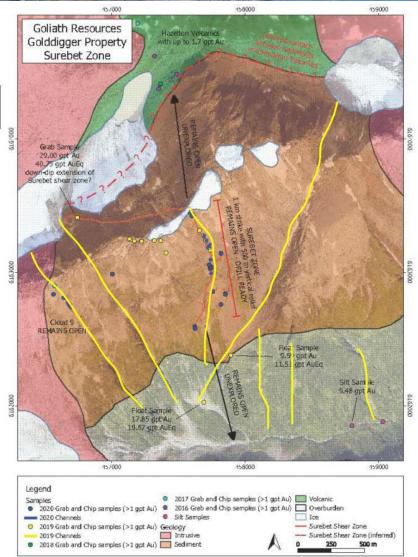

Same geological units and indicated structures as Goliath Resources Surebet Discovery

Rein Turna, Geologist, P. Geo., is the qualified person as defined by National Instrument 43-101, for Juggernaut Exploration projects, and supervised the preparation of, and has reviewed and approved, the technical information in this release.

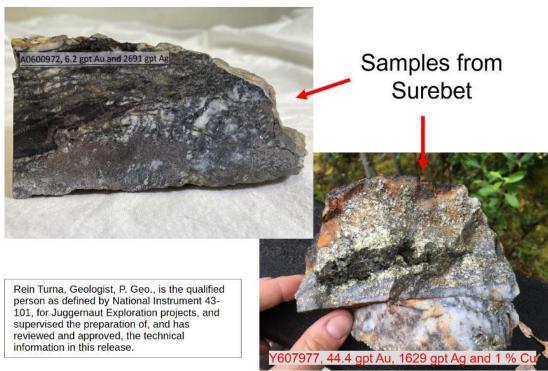

18

Samples are visually very similar, with similar mineralogy and geochemistry to Goliath Resources Surebet Discovery. Surebet is a shear hosted system within Hazelton sedimentary rocks. At Bingo the known mineralization comes from strongly altered and silicified sediments and intrusives where textures have been overprinted.

Bingo samples could come from potential shears/structures in sediments related to an underlying intrusive

Similarities between Bingo and the Goliath Resources Surebet Discovery

- The Bingo property contains the same geological units as Surebet (Hazelton Volcanics and related sediments which host the mineralized shear zone) including intrusives
- Mineralization at Bingo includes pyrite, chalcopyrite (Cu), galena (Pb), pyrrhotite, similar to what is observed at Surebet
- ✓ Gold rich fluids intruded and altered the host rock in a potential shear zone
- Both properties are within the Eskay Rift known to be a fertile area for mineral deposits in the Golden Triangle
- Both Bingo Main and Surebet are located on a N-S oriented lineament that intersect a prominent NE trending lineament

 | Rein Turna, Geologist, P. Geo., is the qualified person as defined by

National Instrument 43-101, for Juggernaut Exploration projects, and supervised the preparation of, and has reviewed and approved, the technical information in this release.

Inaugural Drill Results Comparison

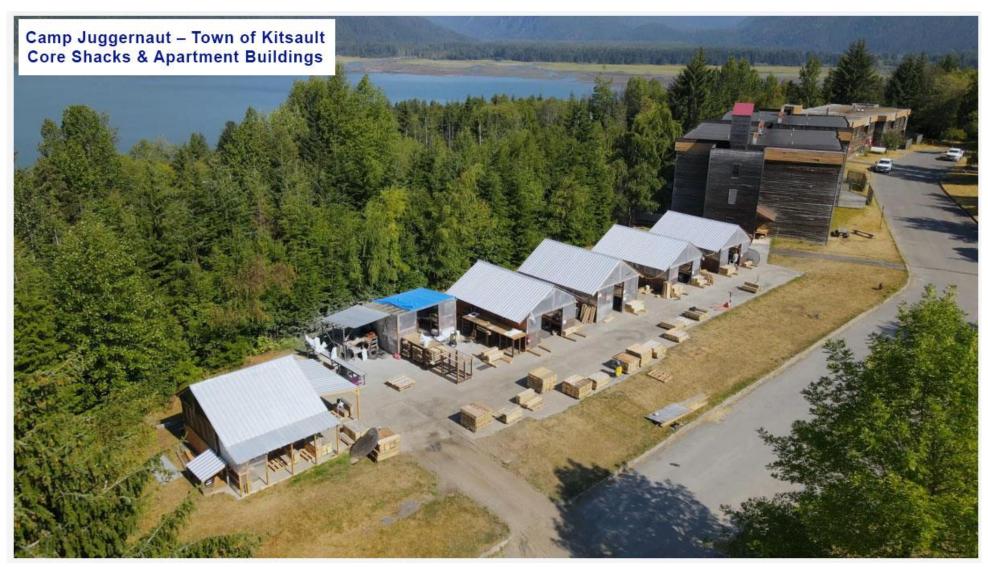

BINGO (Juggernaut Exploration)

- Average grade of 5.67 g/t AuEq
- Average interval width of 7.02 meters (true width)
- 4 holes with average 40 gram*meter AuEq
- Grades up to 11.42 g/t AuEq over 5.11 meters (58 gram*meter AuEq)
- 100 % of the holes intersected Au mineralization
- Gold, Copper, Silver, (Lead, Zinc)
- Stratigraphically closer to potential source
- 12 days of drilling
- Great expansion potential in accessible terrain
- \$5 M MCap (Jan 12, 2024)

SUREBET (Goliath Resources)

- Average grade of 6.29 g/t AuEq
- Average interval width of 5.87 meters (true width)
- 24 holes with average 37 gram*meter AuEq
- Grades up to 6.37 g/t AuEq over 35.72 meters (227 gram*meter AuEq)
- 100 % of the holes intersected Au mineralization
- Gold, Silver, Lead, Zinc, (Copper)
- Stratigraphically higher in the system
- 86 days of drilling
- Expansion limited due to terrain challenges
- \$50 M MCap (Jan 12, 2022)

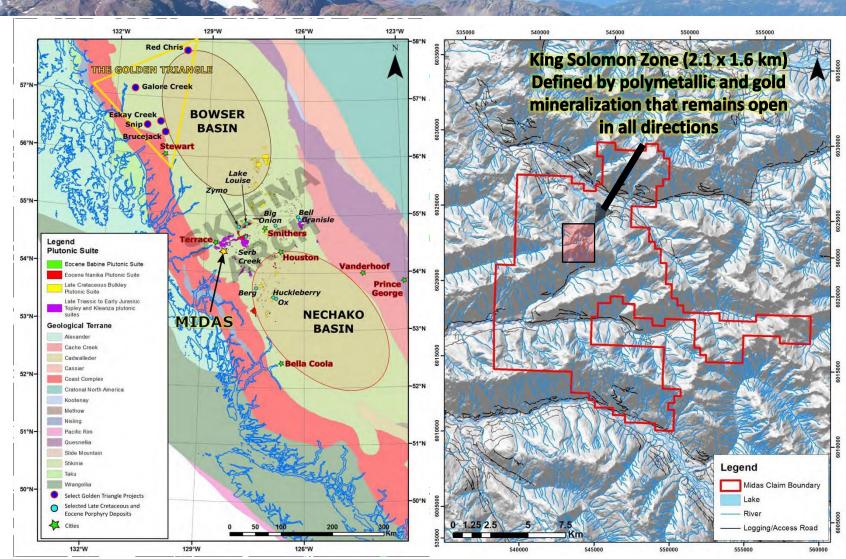

MIDAS ESKAY-STYLE VHMS PROPERTY

MIDAS VIDEO 2024

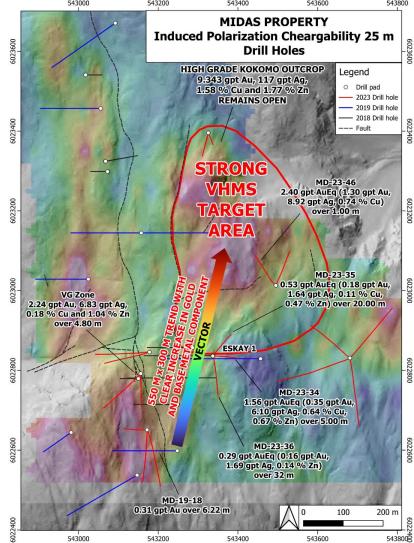

MIDAS PROPERTY

- The Midas Property is 20,803 ha
 - 100 % controlled by Juggernaut
- Logging road access on property
- 14 km to major power, CN rail, and roads
- Further, 10 km to Terrace, BC and major infrastructure, and further 45 km from Kitimat deep seaport and Rio Tinto smelter
- World class geological setting with strong potential for VHMS Eskay Creek-style mineralization

KING SOLOMON ZONE

- BCGS mapped an 18 x 10 km alteration zone of intense gossan development and quartz-sericite-pyrite alteration.
 - King Solomon Zone (2.1 x 1.6 km) falls within the larger alteration zone.
 - Mapped a series of bimodal volcanics and sediments that was subsequently mapped in detail by JUGR senior geologist Stephen Roach.
- Drilling Highlights (2018-2023)
 - MD-18-08 intersected
 6.85 g/t Au over 9.0 m
 - MD-23-34 intersected
 - 1.56 gpt AuEq over 5 m
 - MD-23-36 intersected
 - 1.41 gpt AuEq over 3 m

Possible source of this Mineralization is the intensely silicified zone of a VHMS system hanging wall volcanic rocks

2024 Drill Program

- Multiple drill holes from 6 drill pads collectively spread over 700 m of strike have intersected significant sulphide mineralization
- Drilling defined two new Eskaystyle VHMS mineralized trends at depth that remain open
- Average width in drill core of new mineralize trends is 10 m
- Mineralization consists of moderate (3-6 %), semi-massive (6-10 %) and/or massive (> 10 %) chalcopyrite, sphalerite and pyrite

MD-24-55 MIDAS 3 PAD

11.24 meters of moderate, semi-massive and/or massive sulphide

within 42.55 meters of quartz-sericite-chlorite schist with continuous trace sulphide

MD-24-57 MIDAS 5 PAD

5.00 meters of moderate, semi-massive and/or massive sulphide

within 33.30 meters of quartz-sericite-chlorite schist with continuous trace sulphide

MD-24-59 MIDAS 6 PAD

10.72 meters of moderate, semi-massive and/or massive sulphide

within 57.70 meters of quartz-sericite-chlorite schist with continuous trace sulphide

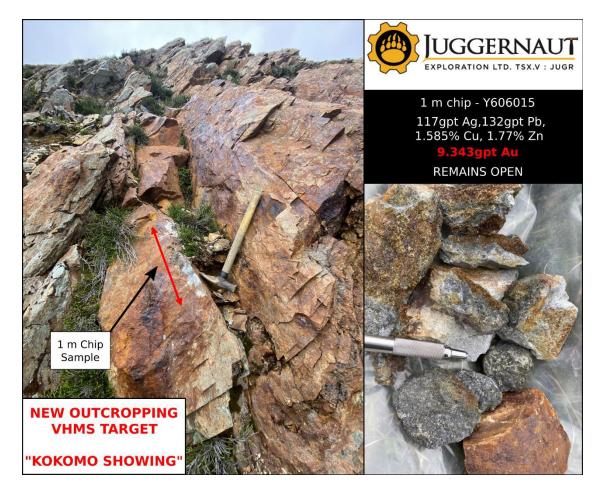

Kokomo Target

- Multiple high-grade gold grab, chips and channel samples including Kokomo showing where a 1 m chip sample assayed 9.343 gpt Au, 117 gpt Ag, 1.58 % Cu and 1.77 % Zn
- Eight (8) Bulk Leach Extractable Gold (BLEG) samples returned high-grade gold ranging from 24.31 ppb Au to 107.35 ppb Au within a 650 meters by 200 meters area located immediately to the southeast draining the Kokomo showing and surrounding area along strike
- Relatively shallow Induced Polarization (IP) chargeability and resistivity anomalies
- Alteration zones extracted from Worldview 3 satellite spectral data show a strong silica, iron and phyllic alteration (quartzsericite-pyrite) signature coinciding with the Kokomo showing

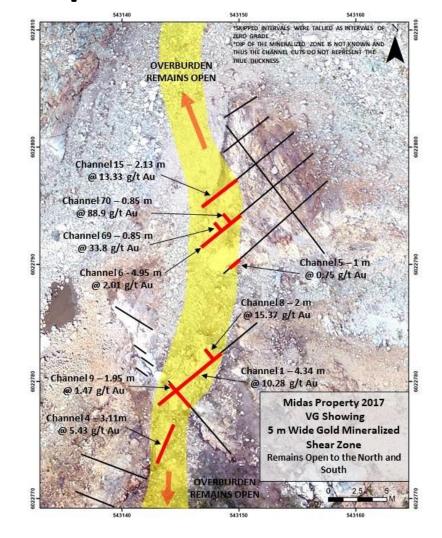

VG Zone – High-Grade Samples

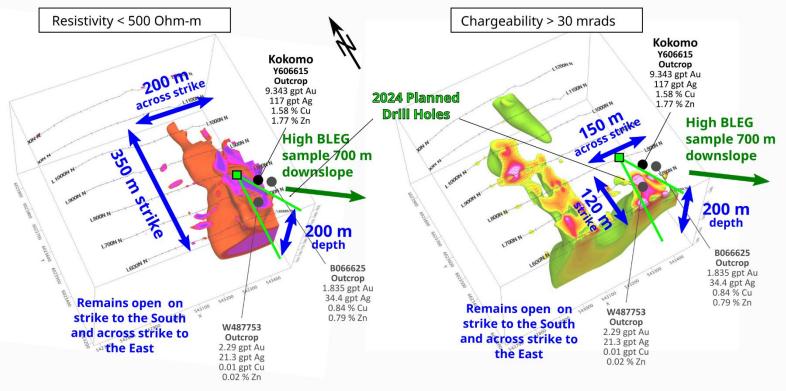

3D IP inversion

- 350 m by 200 m resistivity anomaly (potentially highlighting Zn mineralization)
- 120 m by 150 m chargeability anomaly from surface to 200 m depth (potentially highlighting Au, Cu mineralization)
- Both anomalies remain open to the South and East
- Conducive for semi-massive to massive sulphides like those confirmed on surface at Kokomo

3D Inversion IP Model

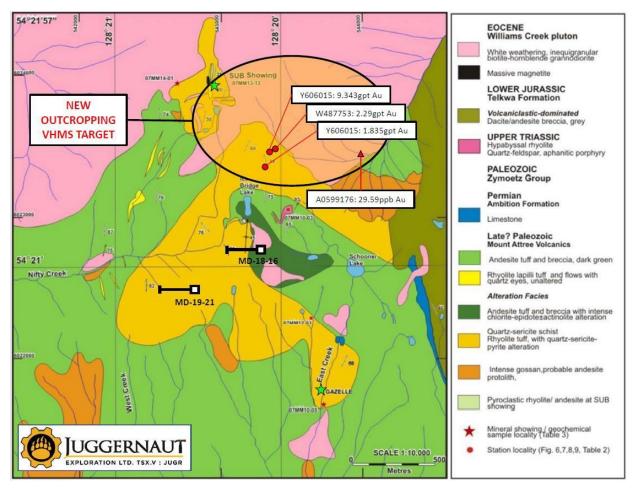

Kokomo high-grade Eskay-style VHMS discovery outcrop drill ready

TSX-V: JUGR | FSE: 4JE | OTCQB: JUGRF

2007 BCGS MAP by M. McKeown and J. Nelson (modified)

Stratigraphy and Alteration

- Conformable sequence of layered Paleozoic felsic to intermediate volcaniclastic rocks
 - Compositionally variable sequence that consists largely of:
 - **1. Andesitic flows**, tuff and breccia with
 - 2. Rhyolite flows, tuff and breccia
- Extensive, intense gossans that occur in the quartz sericite schist, as well as in the silicified, chloritepyrite andesite tuff.

"Through regional and local mapping, the stratigraphy of Paleozoic and Jurassic volcanic rocks in the area southeast of Terrace has been clarified and a new unit that is prospective for VHMS deposits has been identified."

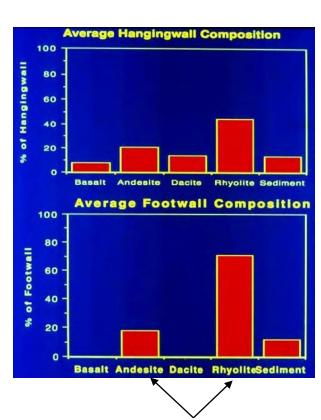

M. McKeown 2007, BCGS

https://juggernautexploration.com

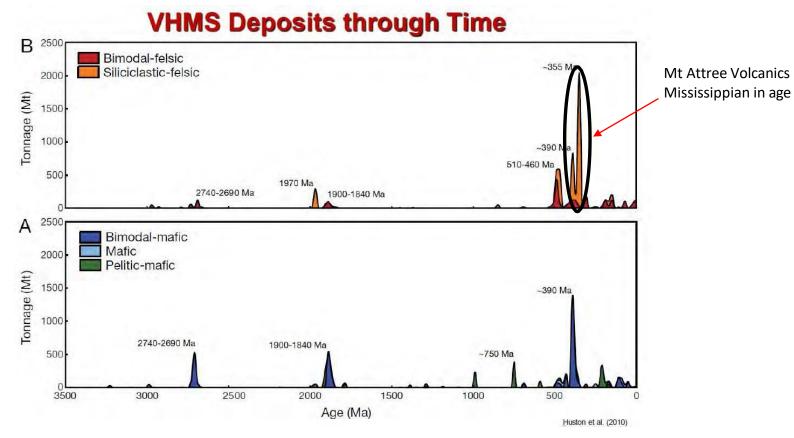

TSX-V: JUGR | FSE: 4JE | OTCQB: JUGRF

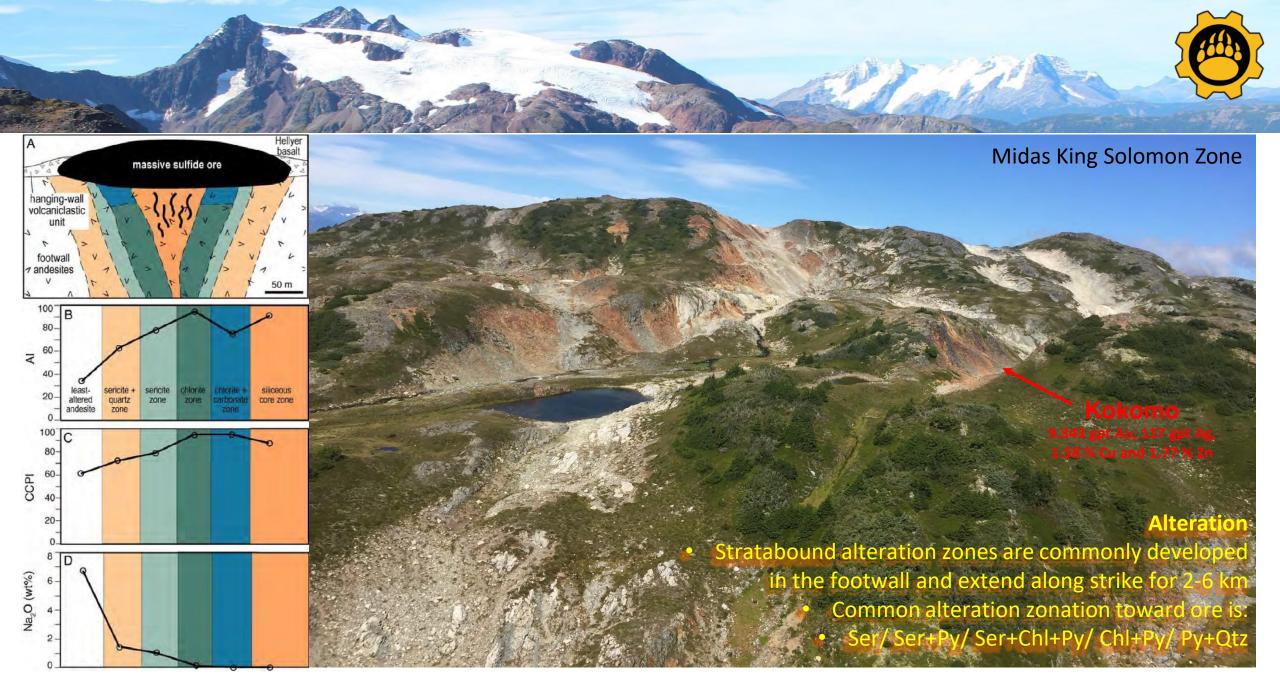

VHMS Mineralization Potential

Midas - Mt Attree Volcanics
Predominantly Andesite/Rhyolite

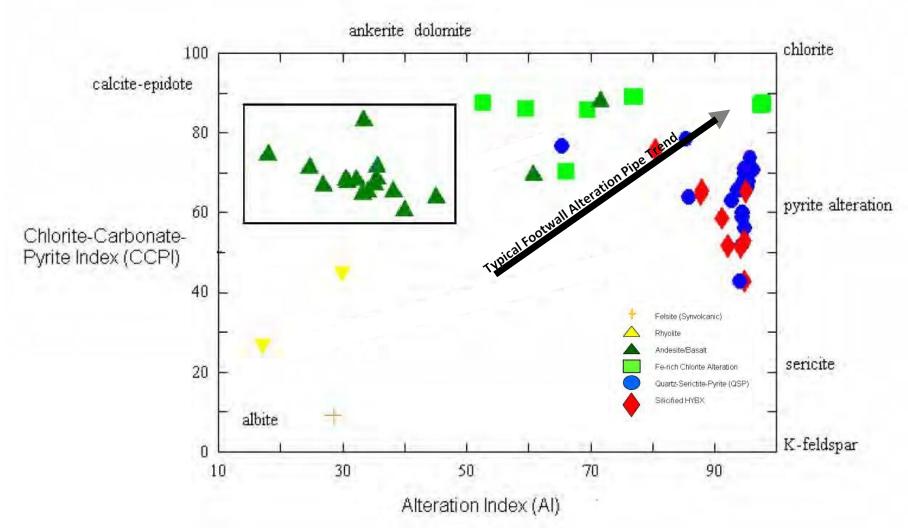

King Solomon Zone Discovery has the right age and type of rocks known to host the majority of VHMS deposits

ALTERATION BOX PLOT

- Useful in providing a vector to the centre of the alteration system
- Fe-Chlorite Alteration, QSP, and Silicified hydrothermal breccia alterations trend from unaltered equivalents in the west to intense alteration in the east
- Intense Na₂O and CaO depletion

Midas Summary – Key VHMS Indicators

Stratigraphy

- Andesite and Rhyolites
- Mississippian in age

Alteration

- Fe-rich Chlorite
- Quartz-sericite-pyrite
- Silicification

Geophysics

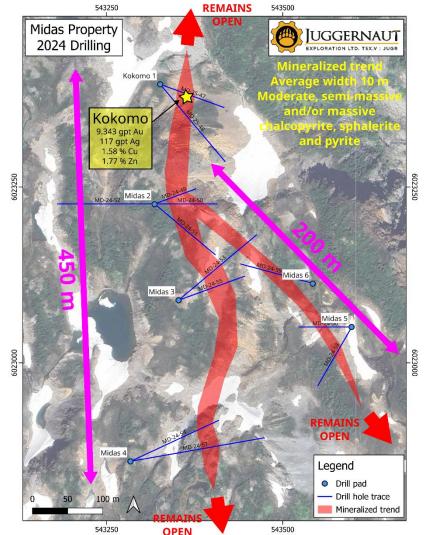

Untested chargeability and resistivity anomalies

Geochemistry

- Widespread Zn signature with secondary Au, Ag, Pb, Cu
- Trace element signature

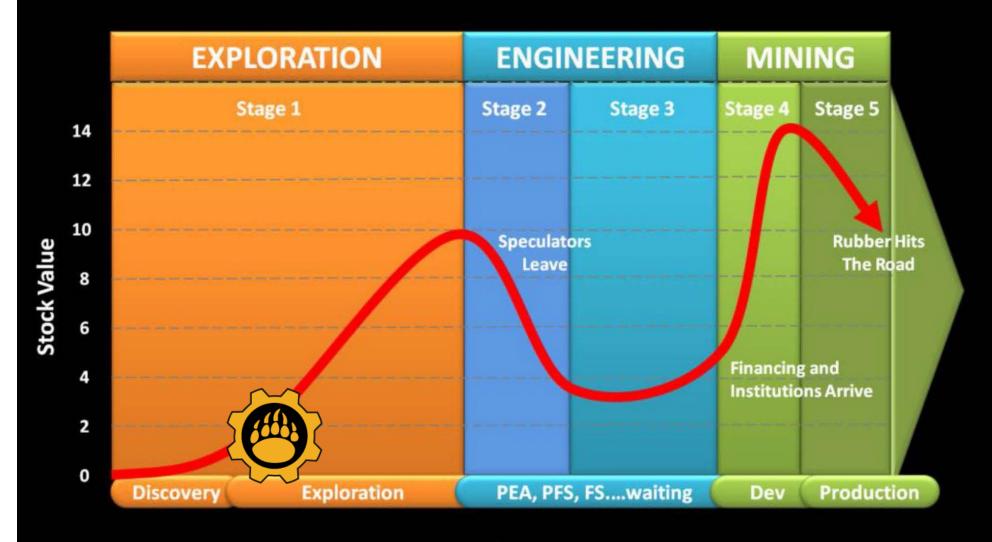

Midas Property Summary, the next Eskay Creek?

- Based on the data we have now Juggernauts Exploration Team believe some of the best targets remain untested. Eskay Creek was discovered in 1988. The 109th drilling hole of Stikine Resources and Calpine Resources' joint venture hit the jackpot with a content of 27.2 g/t Au (gold) and 30.2 g/t Ag (silver) on 208 m. This mine had Canada's richest content with Au 49 g/t, Ag 2406 g/t, lead 3.2% and zinc 5.2%. Obviously, Stikine's stock price skyrocketed, going from \$0.30 to \$64 within a year before the company was bought by a major player.
- Joanne Nelson from the BCGS stated in her report on Juggernauts website (M. McKeown, J. Nelson and R. Friedman) located on page 113 that the sub showing and Gazelle demonstrates Mineralization indicative of a VHMS deposit that has been discovered in an intensely- altered body within the Mt Attree volcanics.
- Results to date through drilling have substantiated this with the holes closest to East Creek fault MD-19-21 displayed textures consistent with VHMS including a 0.5m interval of semi massive to massive pyrite from 47 to 47.5m containing
 0.212 g/t Au with 6.02 g/t Ag and 0.268% Cu hosted within strongly socieita to silica altered rock. Soveral targets
 - 0.213 g/t Au with 6.03 g/t Ag and 0.368% Cu hosted within strongly sericite to silica altered rock. Several targets remain untested on this project. Also the most easterly collared drill hole in 2018 hole MD-18-16 intersected 35 m Au, Ag, Cu and Zn mineralization pointing to the close-by East Creek fault (Gazelle showing area) as having good VHMS potential.
- The Kokomo showing has all the ingredients for a VHMS system, including mineralization (Cu, Zn, Au) and textures (semi-massive to massive sulphides). A 1 m chip sample assayed 9.343 gpt Au, 117 gpt Ag, 1.58 % Cu and 1.77 % Zn hosted within strongly altered silicified rock. In addition, strong IP chargeability and resistivity anomalies remain to be tested at depth.

LASSONDE CURVE – JUNIOR MINER LIFE CYCLE

The Opportunity, Why Buy?

Juggernaut's sister company Goliath generated 1,700% for investors in 9 months. Participants in their \$.10 placement with a full warrant at \$0.15 received a 25 Bagger.

Juggernaut has only 127,381,066 share outstanding.
Juggernaut has a MCAP 9M.

Juggernaut has Crescat Capital / Quinton Hennigh as 19.70% shareholders & technical support.

SHARE STRUCTURE AS OF Oct 1st, 2024

Common shares issued and outstanding: 127,381,066

Fully diluted share capital: 231,620,814 = \$16,776,269

Details of share purchase warrants outstanding on June 30, 2024:

ADDITIONAL INFORMATION

Rein Turna, P. Geo. is the qualified person as defined by National Instrument 43-101, for Juggernaut Exploration Ltd. projects, and supervised the preparation of, and has reviewed and approved, the technical information in this release. Further information regarding Juggernaut's Midas and Bingo properties can be sourced online at www.juggernautexploration.com or by contacting Dan Stuart at 604-559-8028.

All rock, channel, and talus fine samples were crushed and pulverized at ALS Canada Ltd.'s lab in North Vancouver, Terrace, BC, or Reno, Nevada. ALS is either Certified to ISO 9001:2008 or Accredited to ISO 17025:2005 in all of its locations. The resulting sample pulps were analyzed for gold by fire assay in Reno, Nevada or in Vancouver, BC. The pulps were also assayed using multi-element aqua regia digestion at ALS Canada Ltd.'s lab in Vancouver, BC. The silt samples were sieved and assayed at ALS Canada Ltd.'s lab in Vancouver, BC. The silt samples were elect portions of the rock, channel and talus fine samples, as well as the pulps, were shipped to J2 Syndicate's storage facility in Terrace, BC. The silt samples were disposed of after analysis. All samples were analyzed using ALS Canada Ltd.'s assay procedure ME-ICP41, a 1:1:1 aqua regia digestion with inductively-coupled plasma atomic emission spectrometry (ICP-AES) or inductively-coupled plasma mass spectrometry (ICP-MS) finish for 35 elements as well as the Au-AA24 lead-collection fire assay fusion procedure with atomic absorption spectroscopy (AAS) finish. Any results greater than 100 ppm for silver or 10,000 ppm copper, lead and zinc were additionally assayed using ALS's OG46 method particular to each element. This method used an HNO₃-HCl digestion followed by ICP-AES (or titrimetric and gravimetric analysis). Gold values of greater than 10 ppm Au were assayed by the Au-GRA22 method which includes a fire-assay fusion procedure with a gravimetric finish. Blanks and duplicates QA/QC samples were inserted into channels sample laboratory batches. Additionally, and 10% sub-sample of pulp and reject material was sent to Activation Laboratories in Ancaster Ontario, for check-analysis.

The reader is cautioned that grab samples are spot samples which are typically, but not exclusively, constrained to mineralization. Grab samples are selective in nature and collected to determine the presence or absence of mineralization and are not intended to be representative of the material sampled.
